

## Town of North Hempstead Town-wide Trail System

**Client/Owner:** Town of North Hempstead

**Project Location:** North Hempstead, New York

GPI is providing planning and design feasibility analysis for the establishment of a trail system throughout the Town. The system will link major recreational, natural, and municipal facilities that exist and/or are planned within the Town and its many Villages. The trails will provide recreational opportunities for walking, biking, and jogging/exercising. In addition, they will serve as an alternate means of transportation for residents. GPI is also providing a team of professionals that employ Geographic Information Systems (GIS) software to analyze the Town maps and information. The resultant network of trails will occur within existing road right-of-ways as well as newly dedicated corridors through natural and park areas. The trail system will connect commercial and residential areas with mass transportation hubs, town and regional park facilities.
