

## BNIA Economy Parking Facility

**Client/Owner:** Niagara Frontier Transportation Authority

**Project Location:** Buffalo Niagara International Airport (BNIA)

This project had a construction cost of \$7.2 million and was completed in 2002. The assignment was as Prime Consultant to the NFTA to design and oversee the construction of the Economy Parking Lot at the B.N.I.A. This \$7.2M, 2,000+ vehicle facility included toll booths, toll plaza, revenue control, operations building, highway signage, lighting, communications, security cameras, fencing, landscaping and storm water management including underground detention. The Owner required an accelerated time of completion schedule for the design phase and an equally accelerated and aggressive schedule for the construction phases. The time frames required by the NFTA were met by the GPI team and the project was completed within a eight month period. This complex project involved three subconsultants, coordination with four other ongoing projects and multiple agency permits.
