

Town of Brookhaven Assessor's Office GIS Update

Client/Owner: Town of Brookhaven
Project Location: Brookhaven, NY

GPI developed an ArcGIS application for the Assessor's Office that assisted in the following:

- Development of Radius Maps for subject parcels
- Calculating percentage of accessory apartments within a user defined radius of a subject parcel
- Development of mailing labels and other reports
- Adhoc querying using both spatial and non-spatial data

This VB.NET application integrates data from both the Town's ArcSDE layers and data stored in an Oracle-based assessment system.

During this project, GPI also provided the following services:

- Assisted the Town in configuring the required SDE layers for this project.
- Provided Oracle expertise to maximize performance of data access.
- Installed and tested the new applications in the Town.
- Developed a reference manual and training materials.
- Trained Town personnel on ArcGIS basics, application use, and adhoc querying using spatial and non-spatial data.
- Provided technical support to ensure the application met the client's needs.
