Construction-Clerk of the Works

**Client/Owner/Location:** Town of Brattleboro, VT

This project involved the construction of a parking garage, bus terminal, and commercial space building in downtown Brattleboro, Vermont. This was a very tight urban setting to build a four-story parking garage between two streets with a vertical difference of about 30 ft. Included rock excavation, utility relocation, building demolition, slope reinforcement with special anchors, retaining walls, steel frame, double Tee floor beams, prefab concrete textured and brick faced wall panels, bridge from parking garage to Elliot Street, electric plug-ins for electric vehicles, commercial shops on first floor, security office and bus ticket facility on first floor, etc. The neighboring brewery had to be reinforced so it could stand alone. One way traffic was used. GPI supplied the Clerk of the works for the documentation and oversight on this project.
