

Instantly Create Real 3D Building Models From Oblique Aerial Imagery

MultiVision

The next generation in 3D building modeling:

MultiVision™ is proud to introduce its revolutionary 3D modeling application called **MV 3D**.

The MV 3D is a unique software tool which enables users to instantly create real 3D building models from oblique aerial imagery.

Realistic - The MV 3D enables automatic creation of 3D building models with the actual pictures of facades and rooftops of the building.

Accurate - While other products in the field only simulate 3D models, MultiVision's 3D modeling tool derives actual information from the images including 3D coordinates, providing the most realistic 3D model that can be obtained on the market today.

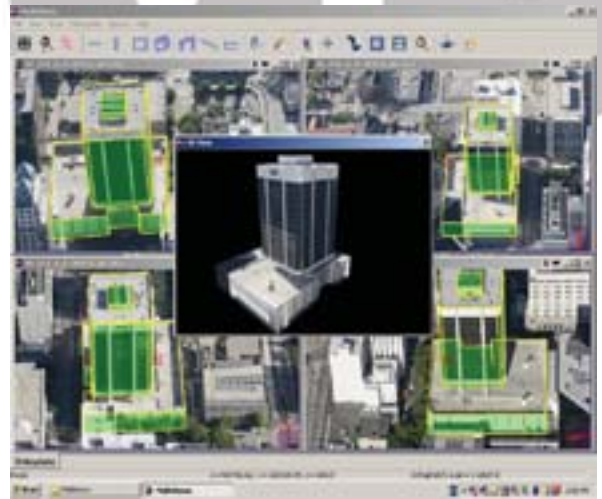

Fast - MultiVision's 3D application is unrivaled in speed, creating 3D building models in under 2 minutes per building.

Cost Effective - MultiVision's advanced technology dramatically reduces the time and costs required to create realistic 3D modeling projects, making MV 3D the most cost effective 3D tool in the market.

But why take our word for it?

Contact us and see for yourself that MV 3D is by far the most superior 3D building modeling product available on the market today.

Instant Creation of a 3D Building Model

Modeling a City

About MultiVision

MultiVision represents the next generation in aerial photogrammetry by introducing a new dimension in digital mapping applications. The MultiVision system provides high-resolution oblique (from an angle) imagery of buildings, structures, neighborhoods, roads, parks and more. Accurate measurement of these structures and elements can be made directly on the oblique aerial photos while viewed on a standard PC, eliminating the need for time consuming, on-site measurements. In addition, MultiVision's revolutionary 3D modeling application enables to create 3D building models at substantially reduced time, labor and cost.

The MultiVision system is commercially installed and active both in the civil and military/security areas and achieves excellent operational and commercial results.
