

Sprint Northeast Cell Development

Client/Owner: Sprint Telecommunications

In an effort to maintain a commanding presence in the ever expanding telecommunications market, Sprint embarked on a massive development and construction campaign in 1997. GPI was involved in this undertaking providing assistance on more than 200 cellular sites in New York, New Jersey, Connecticut, and Delaware. The new cell site construction upgraded Sprint's existing wireless telecommunications cell sites to the state-of-the-art PCS Digital System. After working on Phase 1 of the program for nearly a year, GPI was awarded a continuing services contract as a prime supplier to Sprint for Phase 2 engineering services.

The services that GPI has been providing to Sprint include: engineering, design, zoning, drawings, documentation review and approval, constructability reviews, utility review, telco reviews, and all attendant documentation and requisite drawings. GPI's experience has extended to monopole, lattice, and guyed towers as well as co-locate sites and those mounted on rooftops and water tanks.
