

Utica North-South Arterial Corridor Study

Client/Owner: Herkimer-Oneida Counties Transportation Study

Project Location: Utica, NY

The project involved development and evaluation of alternative improvements to the operation, safety, mobility and appearance of a substandard state arterial. Involved traffic and land use data collection; Level-of-Service evaluation of roadway and intersections; accident analysis; development and cost estimates of concept plans for potential modifications and improvements; travel simulation modeling of traffic impacts; and coordination with community redevelopment and aesthetic enhancement proposals. An extensive public participation effort was included on the planning program.
