

MultiVision

Oblique Imagery

"Oblique Imagery on Demand..."™

The Vision of E9-1-1 with MultiVision....

Image Acquisition

MultiVision is a new, more advanced Oblique Imagery Database that provides you multidimensional viewing at your fingertips. Using MultiVision's *high-resolution* oblique aerial imagery you have quick access to visual information, helping you find the best route to the scene or make tactical placement decisions. MultiVision offers an advantageous perspective that may be utilized for special operations surveillance, suspect search, first responders, emergency, and homeland security.

3D Modeling

Use MultiVision to assist in dispatching. Our visual information from the high-resolution imagery allows for better understanding of entry and exit points, topography, and structural factors such as building height, width, and depth, allowing for optimum information to be shared with the first responders.

Oblique

Primary applications:

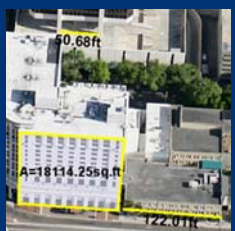

- Visually identify caller location right on the obliques.
- Oblique images interface with any GIS and CAD/CAM system.
- Display and measure vertical & horizontal objects, sites, building facades.
- With our High Resolution imaging you can see detailed areas such as windows, doorways, fire escapes from various views for analyzing.
- Our oblique imagery is tied into your Digital Terrain Model (DTM) data.
- Updating disaster imagery is a "snap".

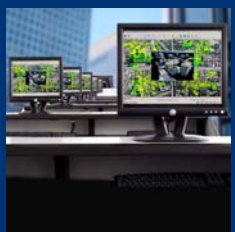

GIS

Primary advantages:

- User friendly, easy to use
- Multiple views of the same address
- Import seamless GIS information effortlessly
- High-resolution imagery
- 3-D capable
- Vertical and horizontal measurements can be done quickly
- Aerial imagery....no lease, no loan, you own
