

## Mt. Sinai "Wedge" Community Park

**Client/Owner:** Town of Brookhaven

**Project Location:** Town of Brookhaven, NY

GPI provided master planning, design and construction layout and inspection services for the Town on this project. The design program included a baseball field, softball field, soccer/lacrosse field, playground area, multi-use field areas, pathway system for jogging/biking, a memorial garden area and parking for 168 cars. The project was subject to oversight from several government agencies and interest groups that required ongoing coordination. In mid-design, the town decided to construct the facility with their forces. Because of GPI's multi-discipline capabilities, we were able to adjust and provide design/build type services to meet the Town's needs and assist them in their efforts to expedite the project for the benefit of the community.

For this 17.5-acre park project, services included landscape architectural design and civil engineering which included irrigation for field areas and necessary utilities for the site. Initially a very flat site, the design created a sculptured treatment of the land around the field uses to provide an interesting recreational experience and environment for the community at large in addition to a very functional sports complex. A key to the success of the project was the coordination between several town departments, the county and the local civic association that represented the community. The GPI design staff also coordinated with the architects for the civic group who constructed a new community center for the site on a parcel immediately adjacent and functionally a part of the project site.
