

Westhampton Library Reconstruction Site Design

Client/Owner: Westhampton Free Library

Project Location: Westhampton, NY

GPI provided site design and engineering services for this library reconstruction project. The library expanded to 14,000 sq ft on two stories. The project involved site layout design, grading and drainage, on-site sanitary system design, planting design, site lighting, and utilities. The project was designed for LEED Gold Level certification. Due to restrictive site limits and a high groundwater table, an innovative drainage system was employed. The site design also included a pleasing and secure reading garden. The garden was graded to allow ADA compliant access from inside the library and to the adjacent street sidewalk for emergency egress.
